

Testing ProBase

Why ProBase is the UK's Best Seller Over 500k grids sold in the UK

ProBase is made from the highest quality recycled plastic.

Sourced in the UK from a reputable supplier and manufactured in the UK to ISO 9001 standards.

Unlike all other grids on the market, ProBase is the only grid specifically designed to carry timber buildings without the need for gravel infill.

All other grids on the market are gravel retention systems whereby the grid holds the gravel in place and the gravel carries the load.

ProBase has load spreading feet on the underneath and is designed to carry your building without any gravel infill.

Delivered to you by DPD on a next week day service with timed deliveries.

ProBase is packaged in boxes made from recycled cardboard.

We believe in doing our bit for our Planet

Buy ProBase and do yours!

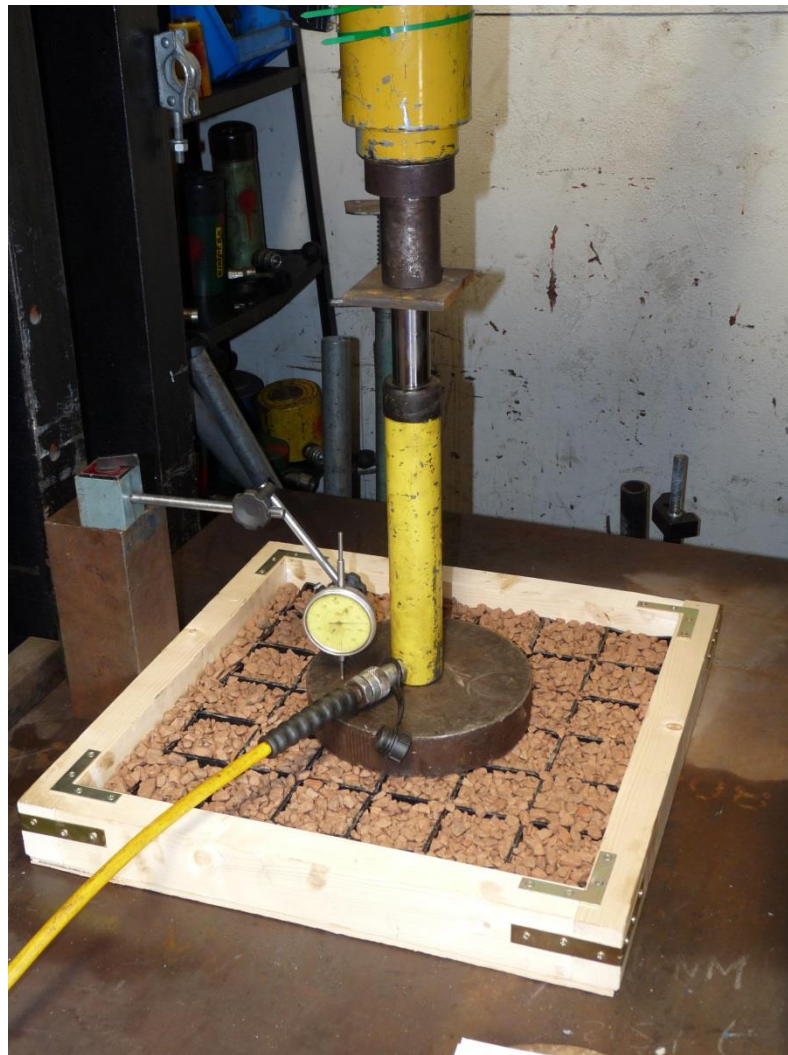

ProBase was independently tested to 51 tonnes of vertical load per grid empty of infill

Crush tested in the laboratory

51 Tonnes Empty

150 Tonnes with Gravel Infill

'Tested for vertical load both **Empty** and with Gravel infill'

Crush Tested Empty 5 Tonne JCB Loader
